EDUCATION

- **Cornell University, Master of Engineering in Computer Science**, Ithaca, NY Expected May 2027
- **Stevens Institute of Technology, BS in Computer Science and Minor in Finance**, Hoboken, NJ | **GPA: 3.83** 2024

WORK EXPERIENCE

System Development Engineer | Yuanta Securities, Taipei City, Taiwan Jul. 2025 – Jul. 2026

- Built and maintained a production **.NET trading-monitoring application**, integrating real-time **NATS + Protobuf messaging**, asynchronous state management, **SQL Server** queries, and on-demand **backend data retrieval** for reliable operational workflows; reduced overhead by **~60–80%**
- Collaborated on a **Python-based market data pipeline** supporting thousands of equities and **10+ years of tick-level data** for strategy backtesting; built a **config-driven data registry** with **lazy loading** and **metadata-based caching**, reducing repeated data loading by **90%+**
- Refactored a production **Python data pipeline** into modular, configuration-driven components for request handling, parsing, persistence, and monitoring while maintaining ingestion of **10,000+ articles/day**

Undergraduate Researcher | Stevens Institute of Technology, Hoboken, NJ Jun. 2023 – Dec. 2024

- Preprocessed a **27M-row multimodal clinical dataset** in **Python**
- Designed and implemented a **pretrained model** using **TensorFlow**, significantly increasing usable data for model training
- Authored *MPLite: Multi-Aspect Pretraining for Mining Clinical Health Records*, **accepted at IEEE BigData 2024**

Course Assistant | Stevens Institute of Technology, Hoboken, NJ Sep. 2022 – Dec. 2022

- **Guided** students with coding assignments in **C programming language**, and fostered student-professor communications

SIDE PROJECTS

Personal Portfolio Site Project | ey090.com Jul. 2026 – Aug. 2026

- Developed and deployed a **React** web application on **AWS Amplify** with **CloudFront CDN**, **AWS Certificate Manager (ACM)** TLS, and edge-configured security and cache-control headers
- Configured apex-domain DNS and **Git-based CI/CD** that redeploys automatically on every push to main branch

SeatMap Project Jun. 2025

- Built a **full-stack web application** with **Spring Boot**, **Vue 3**, and **MySQL**, exposing **RESTful APIs** through a controller-service-repository architecture
- Developed **transactional seat assignment** with **Spring Data JPA/Hibernate**, maintaining employee-seat state consistency

WangWang E-Commerce Platform Project Oct. 2023 – May 2024

- Built a **full-stack** e-commerce web application using **JavaScript**, **Node.js**, **Express**, and **MongoDB**, with **RESTful APIs** connecting application workflows to persistent data
- Implemented **session-based authentication** and **authorization middleware** in Express to control authenticated user access across application routes

Spam Filtering and Classification Project Jan. 2024 – Feb. 2024

- Preprocessed texts with **NLP** techniques in **Python**, and transformed texts into **TF-IDF embeddings** for model training
- Implemented **logistic regression** classifier with mini-batch gradient descent, reducing spam message incidence by **15%**

SKILLS

Technical: Python, C#, Java, JavaScript, .NET, Spring Boot, Node.js, React, Docker, Git, MySQL, MongoDB, SQL Server, PostgreSQL, AWS
